### Pre-release 0.10.0

**Date of Release:** ??, 2021

**Scope:**

- Refactoring/Code cleanups
  - [Fixed #140](#) - Remove deprecated marked annotation elements and code
  - [Fixed #142](#) - Reduce visibility of classes
  - [Fixed #143](#) - Deprecate ExecutionResult.Error
  - [Fixed #145](#) - Remove not used dependency to testcontainers.
  - [Fixed #150](#) - Make LogoutOutputIT more stable
  - [Fixed #151](#) - Refactor code.
  - [Fixed #156](#) - Remove unused code.
  - [Fixed #173](#) - Improve issue template.
  - [Fixed #174](#) - Improve the output in case of an error.
  - [Fixed #175](#) - Enhance the MavenProjectResult.

- [Fixed #176](#) - Remove needless import on MavenProjectResult in docs.
- [Fixed #186](#) - Typo in method name should be isSuccessful.

## Enhancements

- [Fixed #180](#) - Enable debugging of plugin while running integration tests.

## Details

- [Fixed #128](#) - Add automatic module name.

## Breaking Changes

- [Fixed #140](#) - Remove deprecated marked annotation elements and code
- [Fixed #142](#) - Reduce visibility of classes; If you have used the following classes `ApplicationExecutor` or `DirectoryHelper` in your code they have been made invisible for users. No alternative available.
- [Fixed #143](#) - Deprecate `ExecutionResult.Error`; If you have used that directly within your code you should change your code. This is being marked deprecated and will be removed with release 0.11.0.
- [Fixed #175](#) - Enhance the `MavenProjectResult`. Based on the enhancements we have added `getTargetBaseDirectory()` and `getTargetCacheDirectory()`. `getTargetBaseDirectory()` is the same as `getBaseDir()` to keep compatibility in release 0.10.0. The `getBaseDir()` has been marked deprecated and will be removed with release 0.11.0.
- [Fixed #163](#) - You have to change the configuration within your test `pom.xml` file. The configuration to filter the content of the `resources-its` directory.

```
<testResource>
  <directory>src/test/resources-its</directory>
  <filtering>true</filtering>
</testResource>
```

This is not allowed anymore. This means you have to bind the `itf-maven-plugin` with a supplemental goal in your pom file as shown in the following example:

```

<plugin>
<groupId>com.soebes.itf.jupiter.extension</groupId>
<artifactId>itf-maven-plugin</artifactId>
<version>0.10.0</version>
<executions>
  <execution>
    <id>installing</id>
    <phase>pre-integration-test</phase>
    <goals>
      <goal>install</goal>
      <goal>resources-its</goal>
    </goals>
  </execution>
</executions>
</plugin>

```

You have to add the supplemental goal `resources-its` in your configuration.

- [Fixed #186](#) - based on a typo in the method name `isSuccesful()` of the class `MavenExecutionResult` instead of `isSuccessful()` the method `isSuccesful()` is marked deprecated and should not being used anymore and will be removed with release 0.11.0. Replace it with `isSuccessful()`.
- [Fixed #177](#) - Move creation of target structure into `beforeEach`. This change could influence your integration tests. So please check your build. If you have issues please report them.

## Pre-release 0.9.0

**Date of Release:** August 12, 2020

### Scope:

- Refactoring/Code cleanups
  - [Fixed #130](#) - Moving Conditions into separate package
  - [Fixed #131](#) - Reduce visibility of MavenITExtension.
  - [Fixed #132](#) - Remove StringInterpolator from public API
  - [Fixed #134](#) - Maven test should use options = "--errors" by default
  - [Fixed #135](#) - Split properties of @MavenTest across multiple (@Repeatable) annotations
  - [Fixed #136](#) - Remove **debug** from MavenJupiterExtension annotation
  - [Fixed #138](#) - Rename **MavenOptions** into **MavenCLIOptions**.

### Details

- [Fixed #139](#) - Typos in License Text

## Breaking Changes

- [Fixed #135](#) - Split properties of `@MavenTest` across multiple (`@Repeatable`) annotations
  - Deprecate the `@MavenTest` annotation elements `goals`, `activeProfiles`, `options`, `systemProperties`, `debug` with release **0.9.0**.
    - Add replacements `@MavenGoal`, `@MavenProfile`, `@MavenOption` and `@SystemProperty`.
      - This means all the annotation elements of `@MavenTest` will be removed with release **0.10.0**.
    - You have to migrate your code accordingly otherwise you will face compile errors with the upgrade to release **0.10.0**.
    - The users guide has been updated to represent only the new annotations and no usage of annotation elements.
    - Changed the users guide accordingly to the new annotations.
- [Fixed #130](#) - Moving Conditions into separate package
  - The annotations `DisabledForMavenVersion` and `EnabledForMavenVersion` have been moved from `com.soebes.itf.jupiter.extension` into `com.soebes.itf.jupiter.extension.condition` package. The consequence is that you have to change your imports if you use them.
- [Fixed #138](#) - Rename `MavenOptions` into `MavenCLIOptions`.
- [Fixed #132](#) - Remove `StringInterpolator` from public API If you have used it you have to remove the usage. No replacement available.
- [Fixed #136](#) - Remove `debug` from `MavenJupiterExtension` annotation If you have used to turn on debugging via the annotation `@MavenJupiterExtension` this means you need to change your tests and use the `@MavenTest(options=MavenCLIOptions.DEBUG)` to get the same behaviour. Related to [Fixed #135](#) you have to replace it with `@MavenOption(MavenCLIOptions.DEBUG)` or you can use `@MavenDebug`.
